If the LED on the controller lights up continuously, this indicates that the coupling was successful. The vehicle and the controller switch off automatically after 10 minutes if the controller is no longer used. Switching them off separately is not necessary.

**Let's practise!**

- When changing over to new batteries, an operating pause of at least ten minutes is essential.

The power unit has 2 different functions.  
1. If the power unit is inserted into the controller = cordless screwdriver function. For that purpose, insert the supplied bit into the tip of the power unit.  
2. Power unit in the vehicle: remote control function. If that purpose, insert the power unit into the opening behind the driver cabin.

**Troubleshooting****The vehicle does not work / the LEDs flash slowly**

- Have the batteries/power packs been inserted correctly?
- Are the battery contacts bent or dirty?
- Are the batteries discharged or defective?
- Are the vehicle and the transmitter/controller connected properly (see **4**)?

**The vehicle does not work properly; the range is too small!**

- Is battery/accumulator power fading?
- Are any other remote control devices close by which might be transmitting on the same frequency?
- Is interference being caused by metal railings or fences?
- Transmitter or power masts often cause the model vehicle to behave in an uncontrolled manner.
- Are there walkie-talkies/CB radios/wireless networks in the vicinity that might cause interference?
- The vehicle is very warm. Let the vehicle and the controller cool down for approximately 30 minutes.
