The AV-8B Harrier traces its origins back to a British designed vertical take-off and landing (VTOL) aircraft. The first Harrier used by the U. S. Marine Corps was the AV-8A which entered service in the 1960s. The present AV-8B entered service in the mid-1980s, and it is a much larger and more powerful variant. The payload capability of the AV-8B is twice that of the earlier AV-8A. Capable of operating from amphibious assault ships or unimproved forward areas without runways, AV-8Bs provide close air support to Marine forces on the ground. They can deliver a wide variety of conventional and precision guided weapons to include the latest Joint Direct Attack Munitions (JDAM) and laser-guided bombs. For self defense, AIM-9M Sidewinder missiles provide the Harrier with a good air-to-air capability. AV-8Bs currently in operation with the Marine Corps include the AV-8B II+, which features an AN/APG-65 radar, and the Night Attack AV-8B. During Operation Iraqi Freedom, seventy Marine AV-8B II+ and Night Attack Harriers flew from assault ships and shore bases to help overthrow the regime of Saddam Hussein and liberate the people of Iraq.
